A STUDY ON A VAPORIZING COMBUSTOR FOR GAS
TURBINES

Shoichi Tsuij. Washington: NASA, Oct 1970. 64 p. refs. Transl
into ENGLISH from Ishikawajima-Harima Rev. (Japan). v. 9, Sep
1969. p. 473-494.

(Contract NASw-2035)

(NASA-TT-F-13272) Avail NTIS CSCL 21E

A new type of film vaporizing combustor for gas turbines is proposed, which should mark an advance over the conventional combustor. The theoretical and experimental study undertaken in this connection covers such aspects as vaporizing characteristics of liquid fuel film, flame spreading and stability, performance tests on actual combustors, and practical design considerations. A combustion experiment using a square section simplified model of a jet engine combustor is described. The results attest to the superiority of the combustor over conventional types in such aspects as combustion efficiency and intensity. Proposed applications and design procedures are discussed, as well as the prospects of realizing practical combustors for actual use. Author
